

DURESS ALARM MANAGEMENT

In the event of an emergency, nothing is more important than making sure the right people get the information they need to take action. The Radius Enterprise Mobile Duress (EMD) system from Inovonics helps accomplish this by pinpointing the location of mobile duress alarms, providing immediate notification when help is needed and directing responders to the exact location. **More info:** www.securityinfowatch.com/10655433.

IDEAL FOR RETROFITS

Retrofitting doors with Detex Advantex hardware is quick and simple, thanks to multiple mounting plates that fit over existing mounting holes in hardware from five other major manufacturers (either using or covering the holes). The mounting plates allow installation by one person, and a spring-loaded tail piece requires no cutting or sizing. **More info:** www.securityinfowatch.com/10217296.

LOW-LIGHT CAMERA

Surveillance must be able to observe locations with poor lighting that are prone to vandalism. The FLEXIDOME IP corner 9000 MP camera from Bosch addresses these requirements, making it suitable for critical areas in care facilities and hospitals, such as waiting rooms. It features high-resolution optics and a wide-angle fisheye lens for covering an area with fewer cameras. **More info:** www.securityinfowatch.com/11290032.

SPEEDY CARD ISSUANCE

HID Global's FARGO Direct-to-Card (DTC) printer line has expanded its secure issuance capabilities for producing IDs, access control, payment and loyalty cards. An embedded multi-technology iCLASS SE Encoder simplifies card technology migration and personalizes large ID card batches, all from within the one of four different printers. They also include expanded in-line personalization features. **More info:** www.securityinfowatch.com/10225551.

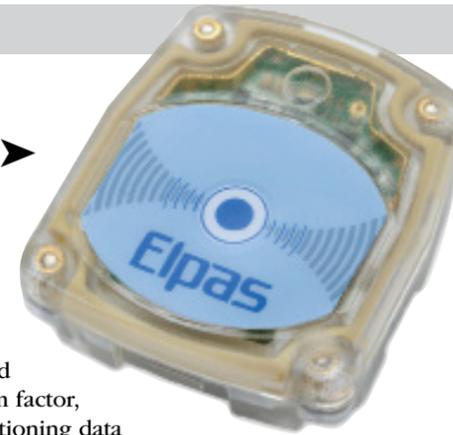

PUBLIC ADDRESS OVER IP

Zenitel's new Exigo IP Public Address System uses an IP network instead of a centralized amplifier to distribute an audio signal to paging locations across a building or campus. The solution consists of a product range of system controllers, network amplifiers, line end transponders, call and access panels (indoor - pictured, industrial and Ex versions), loudspeakers, beacons and network infrastructure. **More info:** www.securityinfowatch.com/11300588.

TRACK HEALTHCARE ASSETS

Elpas' Asset Tracking Tag is an Active RFID Transmitter that facilitates real-time location awareness and intelligence about high-value mobile medical assets. Housed in a small, hospital-grade form factor, the tag delivers real-time positioning data so healthcare personnel can track and log the locations, movements or statuses of patient care equipment. **More info:** www.securityinfowatch.com/11300636.

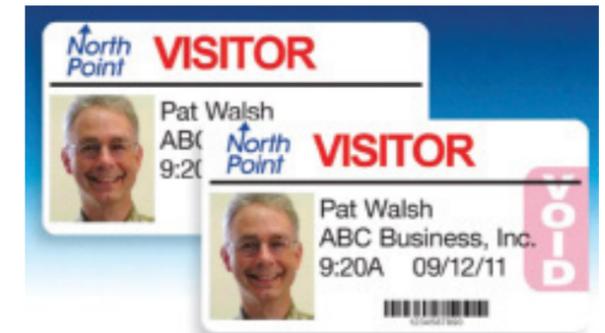

BATHROOM DOOR CONTROLLERS

The 43211-CB Communicating Bathroom Dual Door Control System from Dortronic provides power to operate most low-voltage locking mechanisms, including maglocks, strikes and electrified locksets, and is ideal for use in a two-door restroom facility such as those located in healthcare facilities. **More info:** www.securityinfowatch.com/11281624.

ATTACHES LIKE A PAPER CLIP

In healthcare facilities, family members of patients and other visitors need to have IDs that are easy to issue and wear in order to ensure control and visibility. Badgetec's clip-on visitor tags (badges) are available with security features and use a low-cost plastic clip so they can be worn high on the visitor's garments without fear of adhesive or pin damage. **More info:** www.securityinfowatch.com/11076667.

SELF-EXPIRING IN COLOR

Visitor Pass Solutions' self-expiring visitor badges change color overnight so they cannot be reused. Long available for direct thermal printers, these badges can be created on color inkjet printers; thus they can be created in color as opposed to the thermal printers' black and white. **More info:** www.securityinfowatch.com/10761669.
